

## **Polyurethane Wheel Care and Maintenance**

While polyurethane is a low maintenance material, giving it a little TLC each time you use your boat will go a long way in extending the life of your wheel. A mild detergent, (such as Simple Green) diluted in fresh water will clean away most dirt and debris that may have collected on your wheel. We recommend keeping a spray bottle of this gentle cleanser on hand for quick clean-ups. Washing your wheel is often essential, especially in a saltwater environment.

The other enemy of polyurethane is the hot sun. To minimize the impact of the sun's rays on your wheel, we recommend using a product such as Armor All Wheel Protectant to help keep the material supple. You can further protect your wheel by covering it when not in use.

These short and easy steps will help you preserve your Schmitt Marine Polyurethane Wheel so you can enjoy using it for many boating seasons.
